

FLUXIFY

A DIGITAL LEARNING TOOL
FOR COSMETOLOGY STUDENTS

Embrace the fluctuation of information
and incorporate diverse outside
perspectives about current trends.

Interview 1

Female senior in high school, interested in cross country, running, writing creative stories, living and eating healthy.

Learning Challenges: Peer pressure, anxious about what other people are doing and what grades they are getting.

Learning Motivations: Knowing hard work pays off and leads to a successful career and happy life.

Devices in classroom: 10 laptops in each room, but students can bring their own laptop they are encouraged to do so. In all classes they use cell phones for online quizzes and games, especially in language classes.

Primary Forms of Communication: Texting with friends, emailing teachers for school help.

Preferred Learning Environment: Quiet environments. Groups for some projects – enjoys the collaboration and ability to ask questions. But she is self-conscious about getting things wrong and public settings makes her feel much more vulnerable.

Textbooks in the classroom: Yes, just used for bits of information. Because of lack of funding sometimes they have to share physical textbooks.

Interview 2

Male junior in high school, interested in band, theatre, and soccer

Learning Challenges: Feels that that most classes want to fill you with knowledge and few teachers have gone out of their way to help him really understand the content

Devices in classroom: Devices are all supplied by the school except for the phones. Sometime he is encouraged to bring his own laptop to write short essays to submit online.

Primary Forms of Communication: Texts with his friends, and usually talks to teachers in person.

Preferred Learning Environment: Prefers to work either quiet and alone, or loud in groups.

Textbooks in the classroom: The use of textbooks has declined significantly in his school. Many teachers will print excerpts from textbooks, but never hand the full textbooks out. This could be due to the worry of lost or damaged textbooks if the students take them home. He once had one digital textbook for the class "Microsoft Excel and Access" although there was no hardcopy offered as an alternative.

Alice

Alice is interested in technology. She's teaching herself to code in her free time, and wants to be a software developer when she grows up. When she's not practicing coding, she's usually playing the piano or reading.

In school, she's very successful but finds that she works best on individual assignments. Group projects tend to get loud and chaotic, and this usually distracts her and makes her feel stressed.

She's lucky that she enjoys working with technology, because her teachers frequently bring digital technologies and materials into their lessons. It's not uncommon for her to use an iPad in her English class, a laptop in her math class, and even her cell phone in history.

In fact, she wishes that her work would be digitally-based more often, because it's easy for her to work in digital mediums. She can type notes more quickly than she can write them, and she sets up a very organized Google Drive to categorize notes, assignments, and materials for each class. Sometimes this can be stressful for her, because she has more digital literacy than most of her classmates. Many of them don't use digital technologies unless the teacher requires them, so sometimes she feels singled out.

She keeps up with her friends through text messages and Instagram DM's— they send each other funny pictures whenever they come across them in their feeds. She has a few very close friends, and prefers to spend most of her time in those relationships rather than in large social gatherings.

Brian

Brian is a sophomore in high school. He is interested in playing basketball and spends lots of time practicing with the school team and also playing pick-up games with his friends on the weekends. He finds it hard to focus in class, especially when the teacher lectures for a long time or they have to do long readings from textbook. He gets easily distracted, and shifting between a book, a worksheet, and his notebook doesn't help. He also struggles with file management on his computer because it all feels intangible and he often loses things in the digital abyss. He thinks a more streamlined work environment would help him succeed and keep track of the work he is doing. He also wishes that more of his schoolwork was collaborative and interactive.

He feels more encouraged to learn when he gets positive feedback in a group setting, for example when he gets a question right, or is called out for doing something well. He also enjoys when he is able to have good conversations with his classmates that actually get him excited about a topic. He is discouraged when he feels like the teacher is talking at him. If the teacher is lecturing about a topic and he doesn't understand, he feels excluded from the class. Overall, he has become apathetic towards school because he feels like it doesn't engage him nearly as much as his out of school activities, like sports do. This makes it difficult to really care about the work.

Alice

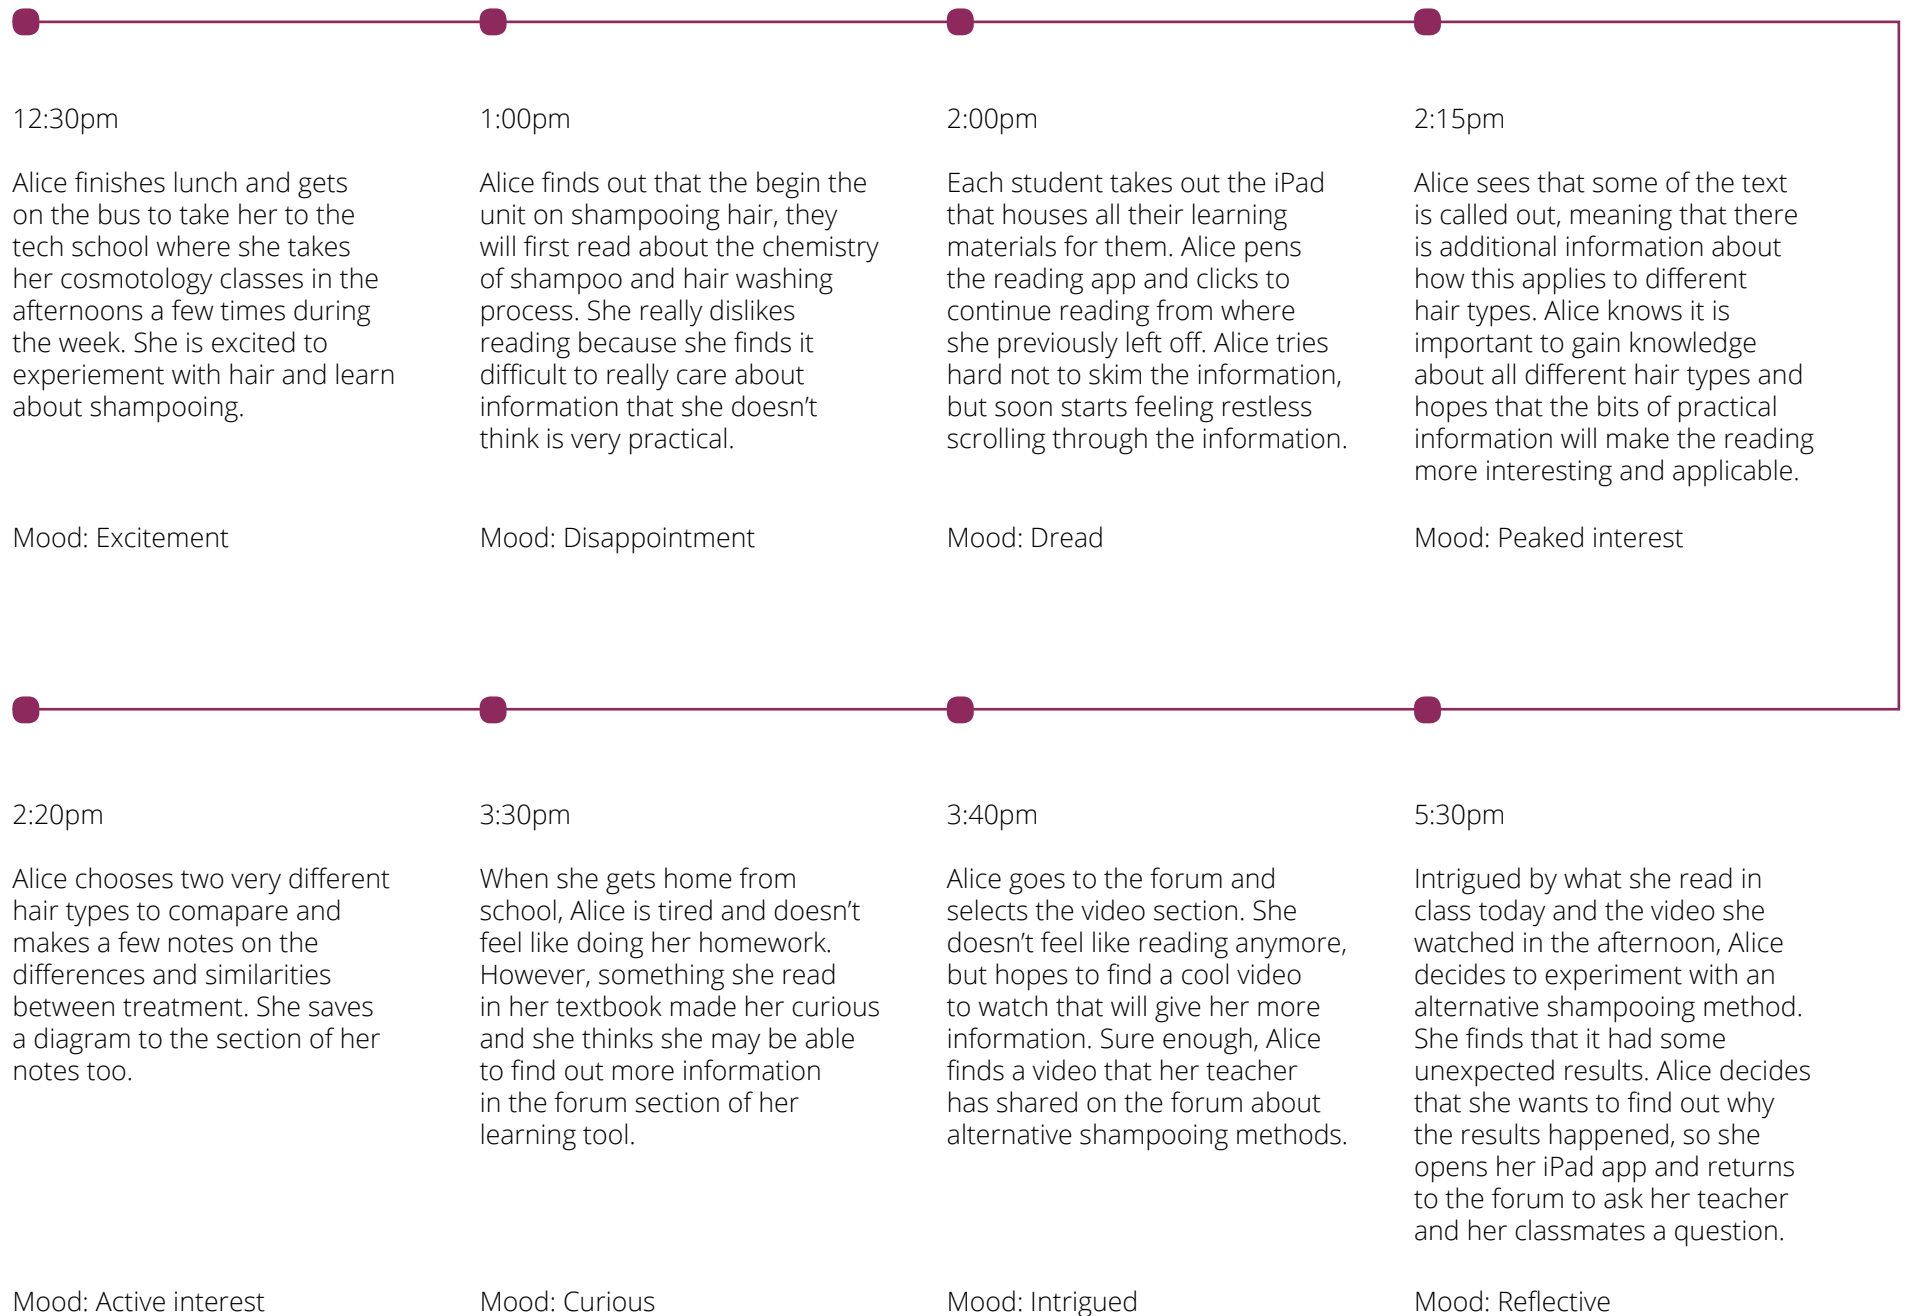

Alice often finds it difficult when she and her classmates are forced to work in groups; she always has good ideas to contribute, but because the chaos of group work makes her feel stressed and anxious, she frequently gets overpowered by her classmates.

She wishes that there were a way she could have more of an impact on her groups, even if she's not comfortable jumping into the chaos.

Brian

In one of Brian's classes, the teacher lectures and shows some examples of the subject matter at the front of the class. Then, the students are given 30 minutes to complete an activity from the textbook. Because the class immediately goes quiet, Brian struggles to focus on his work because he wants to talk and feels repressed. He also finds it very difficult to keep track of the questions he is working on and where to find the information in the textbook.

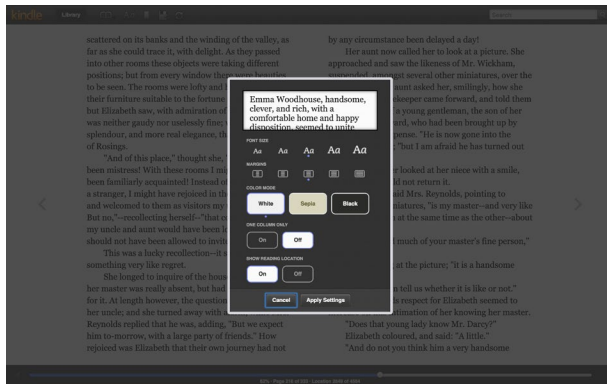

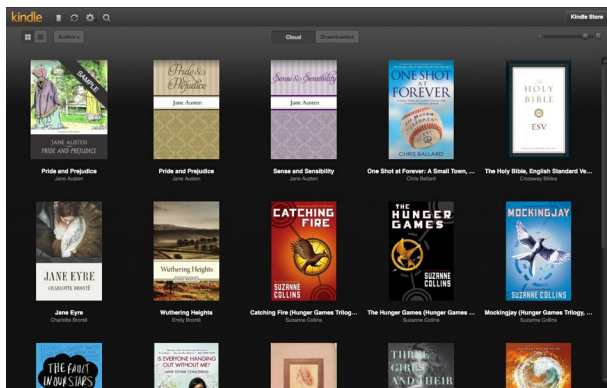

He wishes that he was allowed to ask questions and talk to his classmates without getting in trouble and the teacher thinking that he doesn't care about the work.

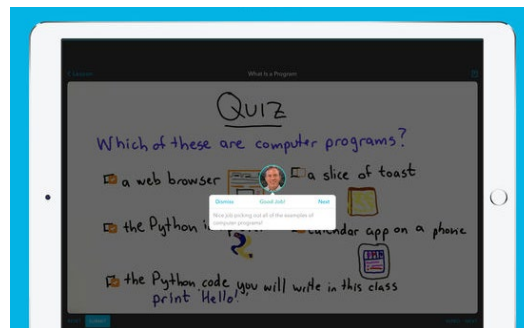

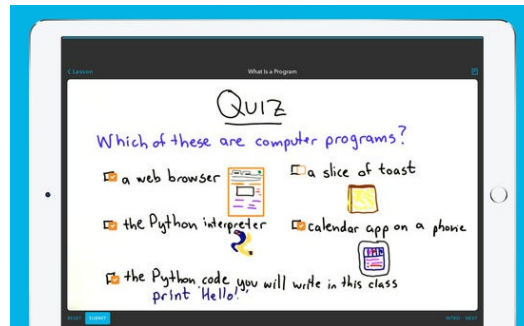

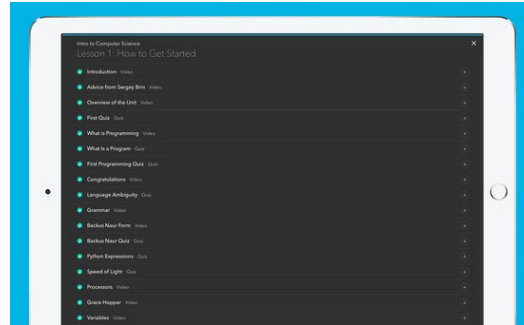

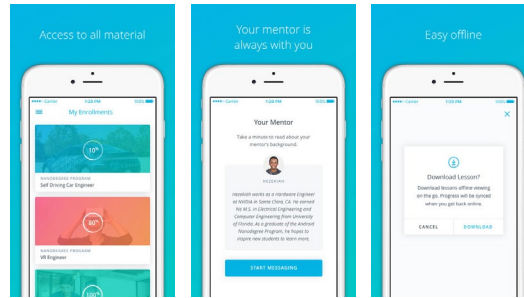

KINDLE

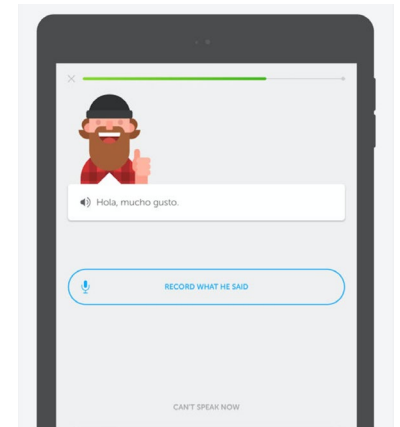

know her husband anymore. He was missing more than he was around and his lies had grown bolder with the telling. She pictured him now sitting behind his modern glass and chrome desk, starting out the window of his fancy high-rise office, blonde hair hanging over his forehead like a young Robert Redford. He would look anything but sorry. With a cappuccino in hand and the newspaper spread out to the financial section, he would barely remember what he had called about. She was
